Atom Game

Take charge of the backend and frontend

Atom Game is a game editor designed to help children (English based, age limit) learn to program. It divides game editing into three logical parts, each of which can be quickly edited and previewed, but the difficulty is greatly reduced. You also have a cloud shop, and if you don't want to design games from scratch, you can use existing resource directly.

■ Skills

Frontend Develop

1. React & React native
2. Antd & Antd-mobile, component framwork

Data Structure

1. Redux
2. ImmutableJs

Backend Develop

1. GraphQL
2. Expressjs
3. Monogodb

Language

js、Python、Matlab、PHP

■ Self Describe

My major in school is machine learning, I start to know about react is around 2016, That time I just want to design a game editor. It's reusable components, data-driven views concept meets with my idea. So I spend a lot of time learning to use the react and its surrounding technology.

I am highly self-motivated, I self leant many useful courses, It helped me with the basic concept of learning and programing, such as Programing Language(PartA, PartB, PartC), and From Nand to Tetris.
